

CASE STUDY

Website Design & Development

In 2021, a Dubai-based startup named Thirty Sleeps launched to provide a travel concierge service specializing in long-term stay solutions such as hotels and serviced apartments for guests who plan to stay for 30 nights or more. To offer guests a user-friendly and customized experience, they approached NEXA to create their website using Hubspot web development.

The website offers a range of options for guests to choose from, including price range, location, and specific needs. Thirty Sleeps acts as an intermediary between the guest and the hotel or apartment property, allowing guests to filter their options, and the startup's team analyzes their requirements to match them with the most suitable accommodation.
