

CASE STUDY

Website Design & Development

Waagner Biro Bridge Services provides governments and private clients in the Gulf region with innovative engineering solutions. NEXA was tasked with creating a new website for the company to represent its true scale and presence within the region.

The previous website was only a few pages deep, so the main objective for the new WordPress-powered site was to show their full service and provide more details about their projects. NEXA also provided SEO services with resounding success.

CLIENT: **waagner biro**
